

Use the CYPHER modern learning platform for in-class display

Elevate classroom learning using the CYPHER platform for in-class display. Benefit from controlled content, streamlined updates, and efficient lectures. Enjoy easy navigation, multimedia integration, and diverse content types. With CYPHER, enhance teaching flexibility and seamlessly incorporate external resources. Experience modern education that empowers both educators and students.

Leveraging the CYPHER platform for in-class display provides many benefits:

Content control

Standardization: Using the CYPHER platform as the presentation source ensures that everyone sees the very same content and resources, leading to consistency in delivery.

Easy updates and edits: If there's a need to update a lesson or resource, the change is made in the course and is immediately reflected in the course. This ensures that students always have access to the most current information.

Flexibility

Variety in content: Educators can switch between different types of content, from presentations to readings to videos, ensuring varied and dynamic lectures.

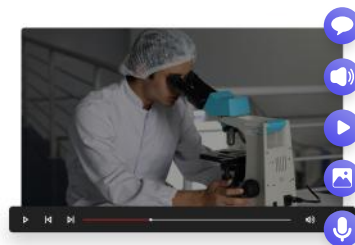

Integrated learning: The CYPHER platform integrates with other educational tools or apps. This means external resources can be seamlessly incorporated into the lectures without having to switch between different platforms.

Save time

Streamlined workflow: No longer spend time creating slides, updating slides, posting slides, and ensuring everyone is using the correct version.

Efficient set-up: Instead of setting up separate devices or tools, everything is integrated so educators can start their lectures more efficiently just by logging on to the CYPHER platform.

Easy and effective

Smooth navigation: The CYPHER platform is known for its gorgeous interface and smooth navigation. This allows educators to quickly navigate through different modules, lessons, or resources, ensuring smooth transitions between topics during lectures.

Seamless multimedia integration: Easily incorporate multimedia resources, such as videos, animations, or simulations, to explain complex concepts right into the course. No longer struggle with embedding into PowerPoint having the right links, or presentations taking forever to load when they have a lot of content.
